FOR IMMEDIATE RELEASE

COMTECH AHA TO PRESENT TUTORIAL ABOUT COMPRESSION AT SNIA STORAGE NETWORKING WORLD IN SAN DIEGO

Moscow, ID – March 31, 2006 – Comtech AHA Corporation (AHA), a wholly-owned subsidiary of Comtech Telecommunications Corp., will be presenting a tutorial titled “Maximizing Bandwidth Efficiency for Storage Area Networks” at the Storage Networking World Conference. The conference is hosted by Computerworld in partnership with the Storage Networking Industry Association (SNIA) and will be held April 3-6 in San Diego, California. Storage Networking World is the leading conference for IT and storage professionals to learn more about the challenges in today’s business environments and the solutions available to meet and overcome these challenges.

The tutorial presented by Comtech AHA will educate participants on the benefits of implementing lossless data compression and capacity optimized storage for greater bandwidth efficiency on the Storage Area Networks (SANs). A discussion will be held on the fundamentals of LZ1-based compression algorithms and capacity optimized storage solutions and how these technologies are applied to further reduce media consumption associated with today’s backup and recovery practices. Presentation participants will gain an understanding of various compression and capacity optimized storage solutions and the benefits and limitations of each technology.

Comtech AHA has been developing lossless data compression solutions for over 15 years and offers a wide range of compression products including integrated circuits, PCI-X boards, and intellectual property cores. Comtech AHA’s newest compression technology implements the open standard compression algorithm GZIP. The AHA362-PCIX compression/decompression accelerator is a half-height, short PCI-X card with data throughput of over 3.0 Gbps. The AHA362-PCIX was developed to increase the data transfer rates in applications such as storage area networks, web servers, web accelerators and web traffic appliances including load balancers, firewall VPN servers and integrated routers/switches.

Session details:

- Thursday, April 6, 10:20-11:05 am PST – “Maximizing Bandwidth Efficiency for Storage Area Networks” by Sean Gettmann: visit <http://www.snwusa.com> for more details.

About AHA

Comtech AHA Corporation develops and markets application-specific integrated circuits (ASICs), boards, and intellectual property core technology for communications systems architects worldwide. Comtech AHA provides flexible, cost-effective solutions for today’s growing bandwidth and reliability challenges. Located in Moscow, Idaho, Comtech AHA has been setting the standard in Forward Error Correction and Lossless Data Compression technology for more than a decade and offers a variety of standard and custom IC solutions for the data communications industry. Comtech AHA Corporation is a wholly-owned subsidiary of Comtech Telecommunications Corp. For more information, visit www.aha.com.

Certain information in this press release contains statements that are forward-looking in nature and involve certain significant risks and uncertainties. Actual results could differ materially from such forward-looking information. Comtech Telecommunications Corp.'s Securities and Exchange Commission filings identify many such risks and uncertainties. Any forward-looking information in this press release is qualified in its entirety by the risks and uncertainties described in such Securities and Exchange Commission filings.
